DS7500 User Manual

Release v1.0.0

2026-06-27

Contents

1 System Settings

1.1 Read firmware version

Read firmware version

1.2 Restore Factory Defaults

Note

If Write Custom Defaults has been performed, Restore Defaults restores those custom defaults; otherwise it restores factory defaults.

Important

Set Factory Defaults clears all custom defaults and restores factory defaults.

Restore custom defaults

Write custom default values

Set factory defaults

1.3 working mode

Note

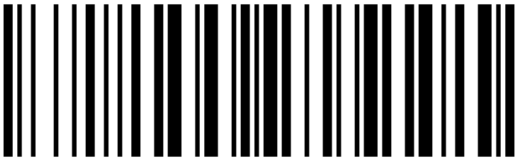
During the data upload process, if you scan the “data upload” command again, the current upload will be canceled or stopped.

Note

In wireless transmission mode, if automatic storage is turned on, barcodes that fail to be transmitted will be automatically saved, and the stored data can be read through “data upload”.

* Normal mode

storage mode



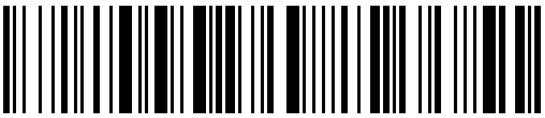
Upload storage data

Read the total number of stored barcodes

Clear storage data after uploading

Read storage space usage

Clear stored barcode

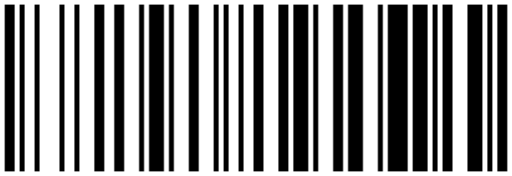


* Autosave mode off

Automatic storage mode is on

2 Power management

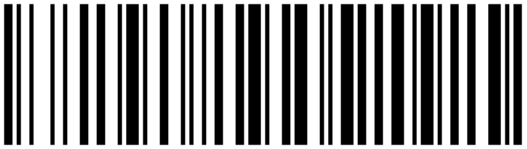
2.1 Read sleep time



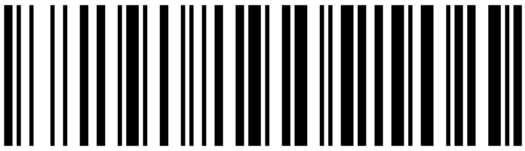
Read sleep time

2.2 Set sleep time

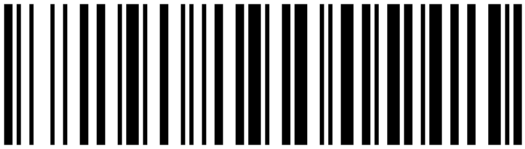
Hibernate now



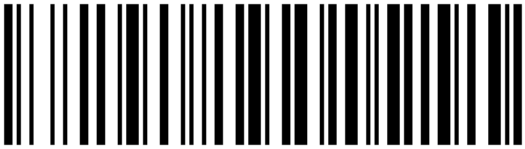
Sleep after 1 minute



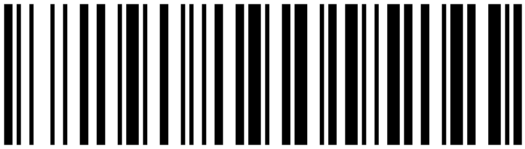
Sleep after 3 minutes (default)



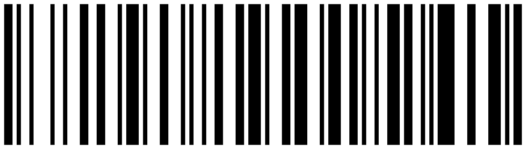
Sleep after 5 minutes



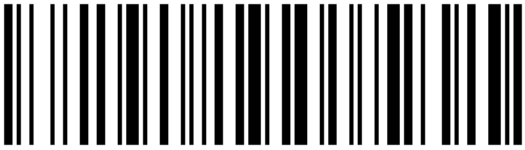
Sleep after 10 minutes



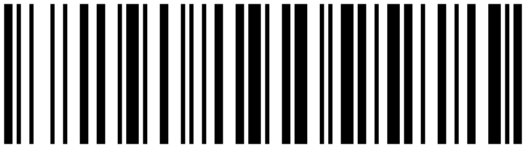
Sleep after 30 minutes



Sleep after 1 hour

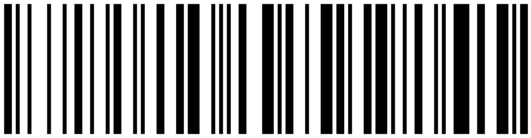


Sleep after 2 hours



never sleep

2.3 Get scanner battery level



Get battery level

3 Feedback Indicators

3.1 Buzzer control

mute

* high volume

medium volume

low volume

* high pitch

low pitch

* SDK voice response off

SDK voice response enabled

Base connection buzzer prompt switch

3.2 Vibration motor control

> **Note**
>
> The vibration motor works with a beep prompt, not all models support this feature.

Disable

Enable

3.3 Buzzer sound definition

Type	Sound	Description	Audio file
Beep	Single tone (2 pitches)	Storage mode decode; power-off prompt.	`storage-mode.m4a`, `shutdown.m4a`
Beep	Single tone (3 pitches)	Power-on prompt; setting saved; upload complete.	`startup.m4a`, `wireless-setting.m4a`
Beep	Short single tone	Successful decode.	`one-beeps.m4a`
Beep	30-second continuous short tone	2.4G pairing waits for the receiver; stops after pairing.	`pair2.4G.m4a`
Alarm sound	Two tones (same pitch)	Low-battery alarm during decoding.	`two-beeps.m4a`
Alarm sound	Three tones (same pitch)	Inventory storage error or capacity exceeded.	`three-beeps.m4a`
Alarm sound	Transmission failure	Alarm when barcode transmission fails.	No audio available
Alarm sound	Five tones (same pitch)	Boot failure caused by low battery.	`five-beeps.m4a`

3.4 Indicator definition

Indicator	Status
red light / green light	When charging, the red light is on and the green light is off; when fully charged, the red light is off and the green light is on.
blue light	Following the buzzer action, the buzzer lights up when it sounds and goes out when it does not sound; models that support Bluetooth mode are also used to indicate the Bluetooth connection status.

4 wired mode

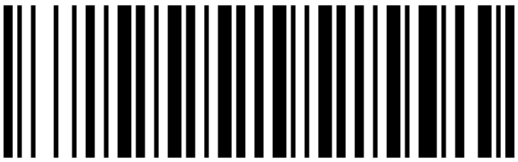
> **Note**
>
> Only applicable to scanners that support wired transmission.

4.1 USB transfer method

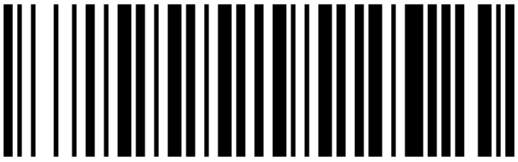
* USB keyboard mode

USB virtual serial port mode

> **Note**
>
> After the automatic interface selection is turned on, the device will automatically switch between wired and wireless; when plugging in the USB cable, the wired mode will be used first. When the USB cable is not plugged in or USB is unavailable, the scanner works in 2.4G mode. Some models may not support this feature.



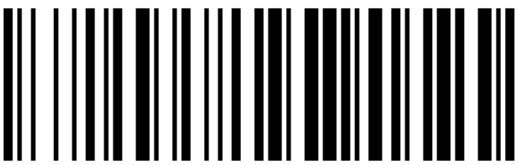
* Wired/wireless automatic selection turns on



Wired/wireless automatic selection off

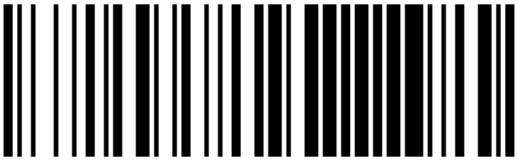
4.2 USB keyboard transfer speed

> **Note**
>
> This setting also affects the speed of RF and Bluetooth transmission of very long barcodes and stored data uploads.



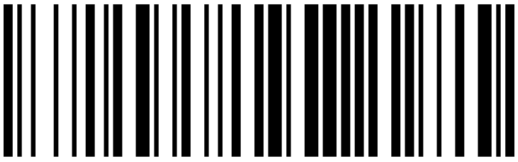
* top speed

top speed



medium speed

medium speed



Read keyboard speed

Read keyboard speed

4.3 USB HID multi-key send settings

> **Note**
>
> The settings in this section are only applicable to Windows systems.

USB HID multi-key sending enabled

* USB HID multi-key sending off

5 wireless mode

> **Note**
>
> Only suitable for scanners that support 2.4G transmission.

5.1 Read Interface Settings

Current Interface Settings

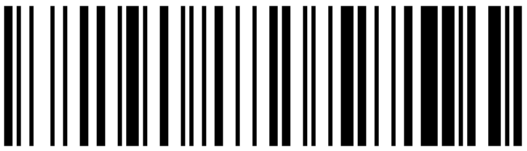
5.2 Wireless transmission method

> **Note**
>
> The blue light is always on or flashing to indicate that it is currently in Bluetooth mode; the blue light is off to indicate that it is currently in 2.4G mode or USB wired mode.

2.4G transmission mode

5.3 2.4G pairing

> **Important**
>
> Only valid in wireless 2.4G mode.



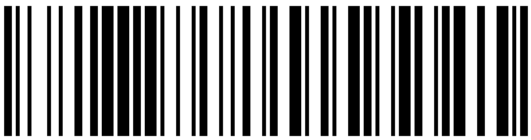
Start 2.4G pairing

one-to-one pairing

One-to-one pairing

5.4 Receiver working mode

> **Note**
>
> Composite device mode is only available on receivers running FWVerL or later. You can also use `ReceiverAddress.exe` to generate a pairing barcode and complete pairing by scanning it.



Receiver as composite device

Receiver as virtual serial port

> **Note**
>
> This mode requires the virtual serial port driver to be installed.

receiver as keyboard

Receiver keyboard transmission speed

Note

The instructions in this section are only applicable to receivers of FWVerL and above. The transmission speeds of the scanner and receiver must match, otherwise errors may occur when transmitting long barcodes.

Important

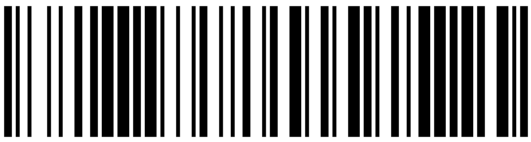
This command is only valid in wireless 2.4G mode and the receiver is connected normally.

Read keyboard speed

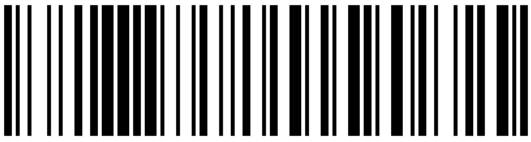
Example

`KB SP=2,4` represents a USB keyboard speed of 2ms and a receiver keyboard speed of 4ms.

receiver keyboard high speed



Receiver Keyboard Medium Speed



Receiver Keyboard Low Speed

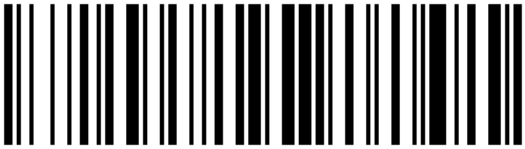
Note

It is only valid in wireless 2.4G mode and the receiving end receives normally.

5.5 2.4G transmission cache

> **Note**
>
> This command is only available on some scanners that support this feature. After scanning the setup code, two short beeps indicate disabled, and one three-tone beep indicates enabled.

When scanning ordinary barcodes, if the amount of barcode data is large and the scanning interval is short, and the data is not uploaded in time, you can use this setting barcode to turn on or off data caching.



SRAM cache switch

In normal mode, after data caching is turned on, if the device briefly leaves the communication distance and enters offline state, you can use this setting to choose to wait for connection before uploading the cached data, or to clear the cached data.

Offline caching switch

6 Bluetooth Mode

> **Note**
>
> Only suitable for RF+BT scanners with Bluetooth function.

6.1 Read Interface Settings

Current Interface Settings

6.2 Bluetooth Transmission Mode

Note

The blue light is always on or flashing to indicate that it is currently in Bluetooth mode; the blue light is off to indicate that it is currently in 2.4G mode or USB wired mode.

Bluetooth Transmission

6.3 Bluetooth Operating Mode

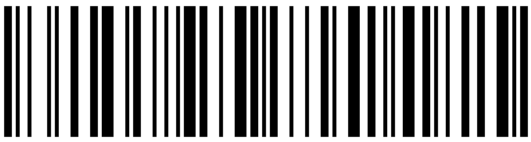
Note

Valid only in Bluetooth mode.

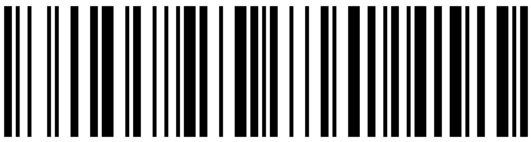
Note

Before switching the Bluetooth working mode, you need to clear the pairing information between the host device and the scanner.

Bluetooth HID Keyboard (Default)



Bluetooth SPP Serial Port



Bluetooth BLE Serial Port

Bluetooth cradle transmission mode

> **Note**
>
> It is suitable for pairing with a Bluetooth cradle that has already been paired. When the barcode on the base is damaged, you can also use the gadget BluetoothAddress.exe to generate a pairing barcode.

6.4 Change Bluetooth Name

After entering the new Bluetooth name, scan the generated QR code to complete the setup. If the host has saved old pairing records after modification, please delete the old pairing first and search for connection again.

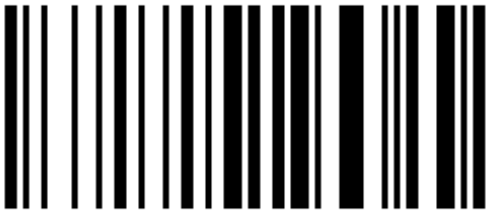
6.5 Clear Bluetooth HID Pairing

After scanning “Clear Pairing” in Bluetooth transmission mode, the scanner will disconnect the currently paired device and clear the pairing list, then wait for new devices to be paired. Historically paired devices need to be deleted and paired again.

Clear Bluetooth Pairing

6.6 System Keyboard Functions

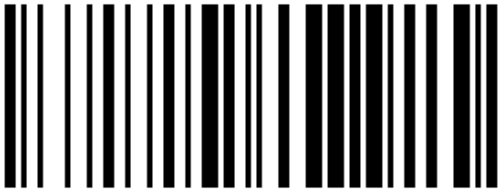
iOS system pop-up keyboard function



iOS pop up/hide keyboard

Press and hold the trigger for 4 seconds to toggle the iOS on-screen keyboard

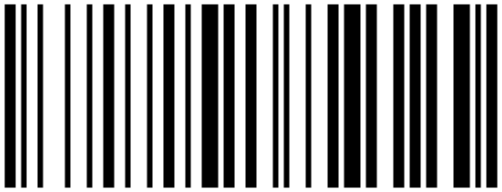
Double-press the trigger to toggle the iOS on-screen keyboard



Pop up iOS keyboard switch after sending

Windows Caps Lock detection

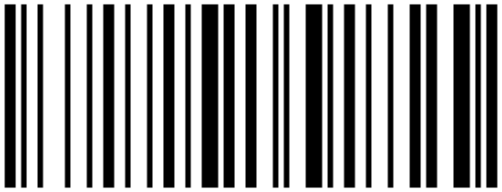
> **Note**
>
> This command is only available on some Bluetooth scanners. After scanning the setup code, two short beeps indicate disabled, and one three-tone beep indicates enabled.



Windows Caps Lock detection switch

6.7 Switch between Bluetooth and 2.4G by pressing and holding for 8 seconds

> **Note**
>
> This command is only available on some RF+BT scanners (DS, C, RT). When enabled, press and hold the trigger for more than 8 seconds and release it to switch between RF and BT. If you hold it for more than 16 seconds, the scanner powers off and the mode does not switch. After scanning the setup code, two short beeps indicate disabled, and one three-tone beep indicates enabled.



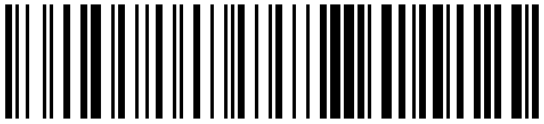
Press and hold the trigger for 8 seconds to toggle RF/BT switching

6.8 Bluetooth keyboard transmission speed

> **Note**
>
> Valid only in Bluetooth mode.

Read Bluetooth HID delay

High speed (2 ms)



High speed (6 ms)

* Medium speed (10 ms)

Medium speed (18 ms)

Low speed (25 ms)

Low speed (30 ms)

6.9 Bluetooth connection status non-sleep setting

> **Note**
>
> After scanning the setup code, two short beeps indicate disabled, and one three-tone beep indicates enabled.

Bluetooth connection status non-sleep switch

7 Keyboard Settings

7.1 HID Keyboard General Setting

HID common settings

> **Note**
>
> The general HID mode settings in this section are applicable to USB keyboard, RF2.4G keyboard, and BT HID keyboard.

Ctrl key combination settings

* Combine-Key Off

Ctrl+ Key Config1

Alt+ Key Config2

Normal-Key Config3

Ctrl+ Key Config4

Alt+ Key Config5

> **Note**
>
> only for ASCII <0x20 chars, Alt+ key only for Windows system.

Case settings

normal

Swap case

all caps

all lowercase

*When set to ALT, TH keyboard language, the case setting does not apply.

Num Lock Settings

Num Lock Settings

Num Lock on

*When the receiving device is a mobile phone, you need to keep the Num Lock off setting, otherwise the numbers will not be displayed.

Enter character set settings

> **Note**
>
> Applicable only to certain mod's of 2D scanners, this setting matches the 2D module's output character set.

Read the current character set settings

automatic

GBK / BIG5 / HANGUL / SJIS

ISO/IEC 8859

UTF8（Word）

UTF8（Txt）

Normal mode

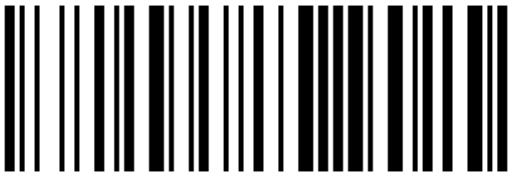
illustrate:

model	Applicable scenarios	Code scan engine output character set	limit
Auto	Automatically select the input character set as UTF8 or ISO/IEC 8859; Word or Txt output is based on the last UTF8 setting.	primitive type	none
GBK	Windows Notepad, Excel Chinese input.	GBK (GB2312) or original type	Applies to Windows systems only.
UTF8 (Word)	Word, QQ Chinese input.	UTF8 or primitive type	Applies to Windows systems only.
ISO/IEC 8859	European single-byte special characters (>= C0H), applicable to FR, GE, TR, PT, ES, CS, IT, UK, HU, SK.	primitive type	Languages not listed need to be added by customization.
UTF8 (Txt)	To input special characters in Windows Notepad, you need to install the Unicode plug-in.	UTF8 or primitive type	Applies to Windows systems only.
Normal	Multi-language special characters, suitable for characters on FR, GE, TR, PT, ES, CS, IT, UK, HU, SK keyboards.	UTF8 or primitive type	Languages not listed need to be added by customization.

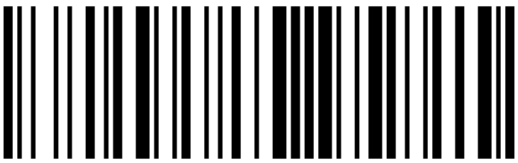
Receiving device selection

Note

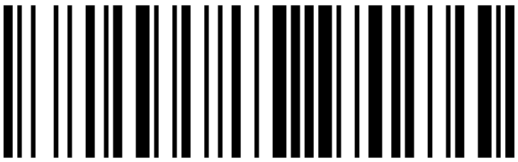
This section is used to set the way different receiving devices input ASCII characters (`0x20` to `0x7F`) and needs to be used in conjunction with *Keyboard Language Settings*.



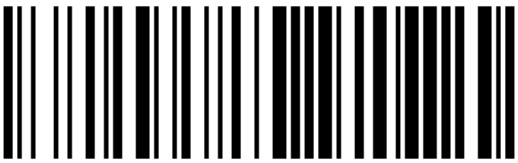
Read the current receiving device settings



Windows device



iPhone/iPad/Mac devices



Android device

*IOS/MAC devices are currently valid: FR, DE, TR, PT, ES, CS, IT, UK, HU, SK. Please refer to the document “MAC iphone ipad keyboard layout for barcode scanner.docx”

*It is recommended to install Google Gboard input method uniformly on Android devices. Please refer to the document “Android device keyboard layout for barcode scanner.docx”

7.2 Keyboard language settings

See also

Keyboard language settings have been split into a separate page: *Keyboard Language Settings*.

>
> Reference file: `RF2.4G, Bluetooth Settings_Chinese, Thai, Korean.docx`.

L28 ALT International Keyboard ALT Global Key

> **Note**
>
> The ALT international keyboard layout is only available on Windows systems. It is not affected by the host keyboard layout, but it reduces transmission speed.

ALT international keyboard

L29 ALT Single Byte Special Keyboard ALT Single Byte Special Key

ALT single-byte special character keyboard

> **Note**
>
> Languages not listed in this section need to be customized to be supported.

9 Data Editing

9.1 Standard Data Editing Settings

This section describes how to configure common output rules such as prefixes, suffixes, and hidden characters by scanning setup codes.

Prefix/Suffix and Hidden Character Settings

You can add up to 10 prefixes and/or 10 suffixes to the output data. To configure them, scan the two-digit hexadecimal numeric setup codes that correspond to the required ASCII value (that is, two barcodes per character).

> **See also**
>
> For character values, please refer to *ASCII Function Key Character Reference Table* and *ASCII Character Reference Table*; for parameters that require input of numerical values, please scan *Numeric Setup Codes*; for specific procedures, see *Add a Prefix or Suffix*.

Can be set to hide the first, middle or last characters of the barcode. After scanning the corresponding hidden setting barcode, scan the two-digit hexadecimal setting barcode corresponding to the length of the characters to be hidden (00~FF, for example, scan `0` and `4` in sequence when hiding 4 characters).

> **See also**
>
> See *Steps to Hide the First/Middle/Tail Characters of a Barcode* for the hidden character process.

Operation Code

Add Prefix

Add Suffix

Clear all prefixes

Clear all suffixes

Hide Leading Characters

Hide Middle Section Start Position

Hide Middle Section Length

Hide Trailing Characters

Numeric Setup Codes

For parameters that require a numeric value, scan the corresponding numeric setup codes.

Numeric Setup Code 0

Numeric Setup Code 1

Numeric Setup Code 2

Numeric Setup Code 3

Numeric Setup Code 4

Numeric Setup Code 5

Numeric Setup Code 6

Numeric Setup Code 7

Numeric Setup Code 8

Numeric Setup Code 9

Numeric Setup Code A

Numeric Setup Code B

Numeric Setup Code C

Numeric Setup Code D

Numeric Setup Code E

Numeric Setup Code F

Output Format Settings

To change the output data format, scan the corresponding setup barcode below.

Default Output Format

Allow Suffix Output

Allow Prefix Output

Allow Hiding Leading Data

Allow Hiding Middle Data

Allow Hiding Trailing Data

Procedure Examples

Add a Prefix or Suffix

1. If prefix and suffix output has not been enabled, please scan the corresponding output formatting code first.
2. The new characters will be appended to the existing suffixes; if you want to abandon the original suffixes, please scan “Clear all prefixes/suffixes” and then reset them.
3. Scan the “Add Prefix” or “Add Suffix” setting barcode.
4. Determines the hexadecimal value of the prefix or suffix to be entered based on *ASCII Function Key Character Reference Table* or *ASCII Character Reference Table*.
5. Scan the corresponding two-digit hexadecimal setting barcode.
6. To continue adding characters, repeat steps 4 and 5.

Example

If you need to add `Ctrl+A` as a prefix, scan “Add Prefix” “9” “7” “4” “1” in sequence.

Example

If you need to add `Ctrl+Alt+A` as a suffix, scan “Add suffix” “9” “7” “9” “9” “4” “1” in sequence.

Steps to Hide the First/Middle/Tail Characters of a Barcode

1. Scan the setting barcode that hides the header, middle starting bit, middle length or trailing characters of the barcode.
2. Determine the hexadecimal value corresponding to the character length to be hidden (for example, hide 4 characters scan `0`, `4`; hide 12 characters scan `0`, `C`).
3. Scan the corresponding two-digit hexadecimal setting barcode.
4. Enable or disable the hidden character function through the output formatting code.

9.2 Extended Data Editing Settings

This section lets you generate data editing setup codes from complete commands in one step. It is intended for batch configuration, remote serial-command delivery, or character replacement.

Online One-Code Setup Generator

> **Note**
>
> The online generator is shown only in the HTML manual. After generating a setup code, scan the generated barcode to complete the setting, or send the command by serial command using the format below.

Add Prefix

Add Suffix

Hide Leading Barcode Characters

Hide Middle Barcode Characters

Hide Trailing Barcode Characters

Character Replacement

One-Code Setup Command Format

Edit format:

```
$DATA#ncllxx#
```

n

`1` suffix; `2` prefix; `3` hides the tail content of the barcode; `4` hides the middle content of the barcode; `5` hides the first content of the barcode; `7` replaces characters.

c

Code ID currently supports only `0`, which indicates all symbologies.

ll

Length, hexadecimal value: `01~0A`, hide `01~FF`, replace `01~05`.

xx

ASCII value. Hexadecimal can be represented by `\x` plus two characters, and the character range is `0~9`, `A~F`.

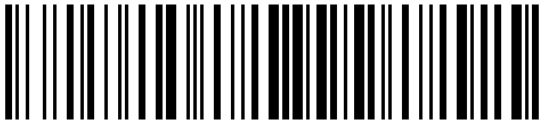
Table 1: One-Code Setup Examples

Command	Description
`$DATA#1005abcd\x03#`	Add `0x05` suffixes: `abcd` + `0x03`.
`$DATA#200ANETUM12345#`	Add `0x0A` prefix `NETUM12345`.
`$DATA#3008#`	Hide the last `0x08` characters of the barcode.
`$DATA#40050A#`	Hides the `0x0A` characters after the `0x05` character in the barcode.
`$DATA#5011#`	Hide barcode header `0x11` bytes.
`$DATA#7001\x1D02GS#`	Replace GS (`0x1D`) characters with `GS`.
`$DATA#7002NT01Z#`	Replace `NT` with `Z`.

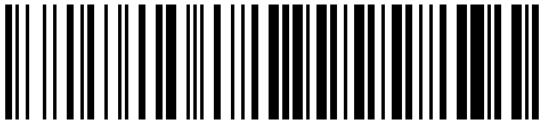
Character replacement operation

Format: `$DATA#70 + replaced character length + replaced characters + replacement data length + replacement data #`

The sum of the lengths of the replaced characters and the replacement characters is <= 6, supporting 1~6 characters being replaced by 5~0 characters.



Read replacement settings



Clear replacement settings

Example

`$DATA#7001\x1D02GS#` means replacing the non-displayable character GS (`0x1D`) with `GS` for display.

Character replacement operation: GS to text GS

Example

`$DATA#7001\x0A01\x0D#` means replacing LF (`0x0A`) with CR (`0x0D`).

Character replacement operation: LF to CR

Example

`$DATA#7006ABCDEF00#` means replacing the string `ABCDEF` with an empty string, that is, not displaying it.

9.3 Terminal character settings

Note

This terminal character is independent of the scan engine suffix and wireless suffix, which facilitates quick setting when the scan engine has no suffix.

None (Default)

Carriage Return CR

Tab TAB

Carriage Return + Line Feed CRLF

Line Feed LF

9.4 GS1 AI field bracket settings

Note

Only some AI fields are applicable and require special version support.

Raw Format (Default)

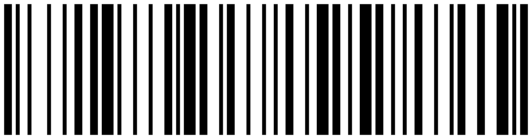
Add Parentheses

Add brackets and separate with CR

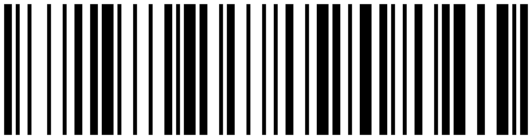
Add brackets and separate them with TAB

10 Scan Mode

10.1 Barcode Decode Mode

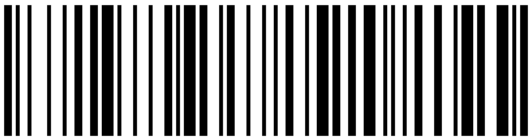


Key scan mode (default)



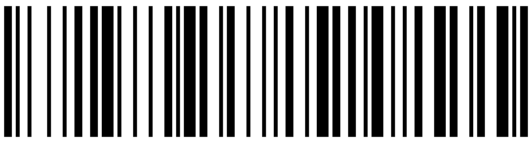
Continuous scan mode

> **Note**
>
> Continuous Scan Mode is suitable for high-volume scanning workflows. Press the Trigger button once to start or stop scanning.



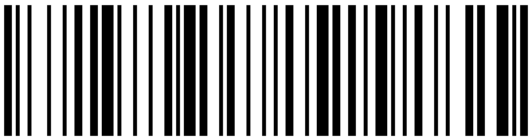
Key pulse scan mode

> **Note**
>
> Scanning starts when a key-level change is detected and maintained for about 30 ms. Scanning stops when another key-level change is detected, or when a decode succeeds or times out.



Host trigger mode (only applicable to some customized models)

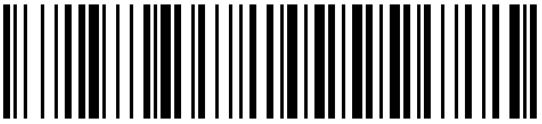
> **Note**
>
> Host trigger mode is only applicable to some customized models.



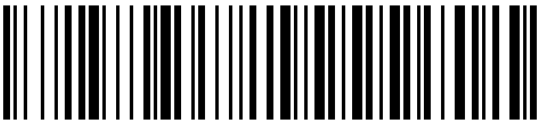
Batch scanning mode (only applicable to some customized models)

Decoding timeout

This parameter sets the maximum time that decoding processing lasts during a scan attempt. Default: 3000ms, range: 0500-9999ms.



3 seconds (default)



6 seconds

Scan Interval

The interval between two readings in continuous mode. Default: 500ms, range: 0100-9999ms.

0.5 seconds (default)

1 second

11 Module Settings

11.1 Device function settings

URL blocking

* Disable

Enable

Invoice function

Turn on the invoice function and automatically turn off Code 128. If you need to read Code 128, you can turn on Code 128 again.

Automatic identification and output of VAT invoices

* Disable

Enable

Invoice type

* Special invoice

Ordinary invoice

11.2 Trigger settings

Trigger Mode

Key hold (level)

Press the button to trigger the reading, release the button to end the reading; after the reading is successful or the single reading time times out, the reading ends.

* Key hold (level)

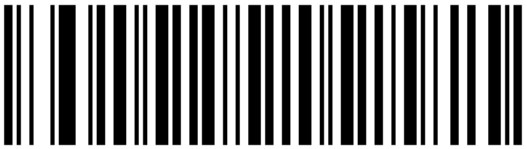
Single key trigger (pulse)

Reading begins after a change in key level is detected and maintained for about `30 ms` (the specific time depends on the product); reading ends when a change in key level is detected again. This reading ends after the reading is successful or the single reading time times out.

Single key trigger (pulse)

Continuous Mode

The reading engine works continuously; each time the reading is successful or the single reading time expires, the reading ends, and the next reading is automatically triggered after the continuous reading interval is reached.



Continuous Mode

Auto sensing mode

The reading engine detects the brightness of the surrounding environment and triggers reading when the brightness changes. After the reading is successful or the single reading time times out, the current reading ends and the environment brightness detection is re-entered.

Auto sensing mode

Single scan time (scan duration)

Set the maximum duration of a single scan. After scanning this setup code, scan three numeric setup codes to enter the time coefficient. If the value has fewer than three digits, pad it with leading `0`.

Default

`3000 ms`

Unit

`100 ms`

Range

`500-25500 ms`

Single scan time

Example

To set `500 ms`, scan this setup code, then scan numeric setup codes `0`, `0`, and `5` in sequence.

To set `10500 ms`, scan this setup code, then scan numeric setup codes `1`, `0`, and `5` in sequence.

To change a selection or cancel an incorrect setting, scan *Cancel Barcode*.

Single Scan Time (Scan Duration) Quick Setup

To select a commonly used duration directly, scan one of the quick setup barcodes below.

Unlimited

3 s

5 s

10 s

15 s

20 s

30 s

60 s

Continuous reading interval

In Continuous Mode, this parameter defines the wait time between two scan attempts. After the configured interval elapses, the next scan starts automatically whether the previous attempt succeeded or failed.

After scanning this setup code, scan two numeric setup codes to enter the time coefficient. If the value has fewer than two digits, pad it with a leading `0`.

Default

`500 ms`

Unit

`100 ms`

Range

`0–9900 ms`

Continuous reading interval

Example

To set `500 ms`, scan this setup code, then scan numeric setup codes `0` and `5` in sequence.

To change a selection or cancel an incorrect setting, scan *Cancel Barcode*.

Same code delay

To prevent the same barcode from being decoded repeatedly in Continuous Mode or Auto-sense Mode, you can require the decode engine to wait for the configured delay before reading the same barcode again.

After scanning this setup code, scan two numeric setup codes to enter the time coefficient. If the value has fewer than two digits, pad it with a leading `0`.

Default

`500 ms`

Unit

`100 ms`

Range

`0–9900 ms`

Same code delay

Example

To set `200 ms`, scan this setup code, then scan numeric setup codes `0` and `2` in sequence.

To set `1500 ms`, scan this setup code, then scan numeric setup codes `1` and `5` in sequence.

To change a selection or cancel an incorrect setting, scan *Cancel Barcode*.

Same code delay quick setting

To select a commonly used same-code delay directly, scan one of the quick setup barcodes below. Six preset levels are available: 0 s, 1 s, 3 s, 5 s, 7 s, and unlimited delay.

No delay

1 s Delay

3 s Delay

5 s Delay

7 s Delay

Unlimited Delay (Disable Same-Code Reads)

11.3 Engine Code ID

Transport code ID characters

Parameter number

`0x2D`

Default

`None`

Code ID characters are used to identify the barcode type. When a device may decode multiple barcode types, the Code ID or AIM ID can be inserted between the prefix characters and the decoded data. See *Code ID* for Code ID characters and *AIM code identifier* for AIM ID characters.

Code ID

AIM ID

Linear code type safety level

The reading engine provides four levels of decoded security linear encoding types. Select a higher security level for declining barcode quality levels. Follow

As the security level increases, the reading engine becomes less aggressive. Choose the security level that suits your barcode quality.

Linear safety level 1

All code types must be successfully read 1 time before being decoded

* Linear safety level 1

Linear safety level 2

All code types must be read successfully 2 times before being decoded.

Linear safety level 2

Linear safety level 3

All code types must be successfully read 3 times before being decoded.

Linear safety level 3

Linear safety level 4

All code types must be successfully read 4 times before being decoded

Linear safety level 4

UPC-A

Enable/disable UPC-A

Scan the corresponding barcode below to enable or disable UPC-A.

* Enable UPC-A

Disable UPC-A

UPC-A preamble

Preamble characters (country code and system characters) may be transmitted as part of the UPC-A code system. Select one of the following options to set and transmit the UPC-A preamble to the host: transmit system characters only, transmit system characters and country code (“0” for United States), or transmit no preamble.

No preamble (<DATA>)

* System characters (<SYSTEM CHARACTER> <DATA>)

System characters & country code (<COUNTRY CODE> <SYSTEM CHARACTER> <DATA>)

Transmit UPC-A check digit

Scan the corresponding barcode below to set whether to transmit the UPC-A check code.

* Transmit UPC-A check digit

Do not transmit UPC-A check digit

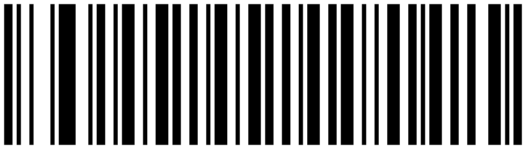
Scan the corresponding barcode below to enable or disable Code 128.

* Enable Code 128

Disable Code 128

Code 128 Send check character



Enable

* Disable

Code 128 length setting

Allows reading of Code 128 codes of a specific length. After scanning the length setting barcode, scan the 4-digit setting barcode to set `L1` and `L2`; `L1` and `L2` each occupy 2 digits. If there are less than 2 digits, add `0` in front.

When scanning the “Code 128 Any Length” setting barcode, any length can be read, and there is no need to scan the numeric setting barcode.

Default

`0-99`

Set range

`01-99`

condition	Description
`L1 < L2`	`L1` is the minimum length, `L2` is the maximum length
`L1 > L2`	`L1` is the maximum length, `L2` is the minimum length
`L1 = L2`	Only read fixed length

Example

Only `4-8` characters are allowed to be read: scan the numeric setting barcode `0`, `4`, `0`, `8`, or `0`, `8`, `0`, `4`.

Fixed reading of `12` characters: Scan the numeric setting barcodes `1`, `2`, `1`, `2`.

* Enable Code 39

Disable Code 39

Code 39 length setting

Allows reading of Code 39 codes of a specific length. After scanning the length setting barcode, scan the 4-digit setting barcode to set `L1` and `L2`; `L1` and `L2` each occupy 2 digits. If there are less than 2 digits, add `0` in front.

When scanning the “Code 39 Any Length” setting barcode, any length can be read, and there is no need to scan the numeric setting barcode.

Default

`0-99`

Set range

`01-99`

condition	Description
`L1 < L2`	`L1` is the minimum length, `L2` is the maximum length
`L1 > L2`	`L1` is the maximum length, `L2` is the minimum length
`L1 = L2`	Only read fixed length

Example

Only `4-8` characters are allowed to be read: scan the numeric setting barcode `0`, `4`, `0`, `8`, or `0`, `8`, `0`, `4`.

Fixed reading of `12` characters: Scan the numeric setting barcodes `1`, `2`, `1`, `2`.

Code 39 any length

Code 39 specifies the length

Code 39 check digit verification

When this feature is enabled, the reading engine checks the integrity of all Code 39 encodings to verify that the data conforms to the specified check digit algorithm. Only Code 39 encodings containing a modulo 43 check digit can be decoded. This feature can only be enabled if the Code 39 code format containing the modulo 43 check digit can be decoded.

Verify Code 39 check digit

* Do not verify Code 39 check digit

Transmit Code 39 Check Digit Scan this barcode to transmit the data check digit.

Transmit Code 39 check digit

* Do not transmit Code 39 check digit

Enable/disable Code 39 Full ASCII

Code 39 Full ASCII is evolved from Code 39 and can encode double characters into Full ASCII characters. Scan the corresponding barcode below to enable or disable Code 39 Full ASCII.

See *Character Reference Table* for the mapping of Code 39 characters to ASCII values.

Enable Code 39 Full ASCII

0x01

Enable/disable Code 93

Scan the corresponding barcode below to enable or disable Code 93.

Enable Code 93

* Disable Code 93

Set Code 93 length

Allows reading of Code 93 codes of a specific length. After scanning the length setting barcode, scan the 4-digit setting barcode to set `L1` and `L2`; `L1` and `L2` each occupy 2 digits. If there are less than 2 digits, add `0` in front.

When scanning the “Code 93 Any Length” setting barcode, any length can be read, and there is no need to scan the numeric setting barcode.

Default

`0-99`

Set range

`01-99`

condition	Description
`L1 < L2`	`L1` is the minimum length, `L2` is the maximum length
`L1 > L2`	`L1` is the maximum length, `L2` is the minimum length
`L1 = L2`	Only read fixed length

Example

Only `4-8` characters are allowed to be read: scan the numeric setting barcode `0`, `4`, `0`, `8`, or `0`, `8`, `0`, `4`.

Fixed reading of `12` characters: Scan the numeric setting barcodes `1`, `2`, `1`, `2`.

Code 93 any length

Code 93 specifies the length

Code 11

Enable/disable Code 11

Scan the corresponding barcode below to enable or disable Code 11.

Enable Code 11

* Disable Code 11

Code 11 length setting

Allows reading of Code 11 codes of a specific length. After scanning the length setting barcode, scan the 4-digit setting barcode to set `L1` and `L2`; `L1` and `L2` each occupy 2 digits. If there are less than 2 digits, add `0` in front.

When scanning the “Code 11 Any Length” setting barcode, any length can be read, and there is no need to scan the numeric setting barcode.

Default

`4-99`

Set range

`01-99`

condition	Description
`L1 < L2`	`L1` is the minimum length, `L2` is the maximum length
`L1 > L2`	`L1` is the maximum length, `L2` is the minimum length
`L1 = L2`	Only read fixed length

Example

Only `4-8` characters are allowed to be read: scan the numeric setting barcode `0`, `4`, `0`, `8`, or `0`, `8`, `0`, `4`.

Fixed reading of `12` characters: Scan the numeric setting barcodes `1`, `2`, `1`, `2`.

Code 11 any length

Code 11 specifies the length

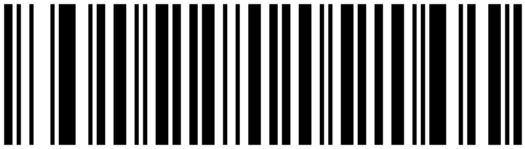
Check code verification

This feature allows the reading engine to check the integrity of all Code 11 encodings to verify that the data complies with the specified check digit algorithm. This will select the check digit mechanism for the decoded Code 11 barcode. Options include checking one parity digit, checking two parity digits, or disabling the feature.

To enable this feature, scan the Code 11 barcode below that matches the required number of check digits.

* Enable

a check digit



two check digits

Transmit Code 11 check digit

Scan the barcode below to choose whether to transmit the Code 11 check digit.

Transmit Code 11 check digit

* Code 11 check digit is not transmitted

Note

In order for this parameter function to be implemented, Code 11 check code verification must be enabled.

Interleaved 2 of 5/ITF/Crossed 25 yards

Enable/Disable Interleaved 2 of 5

Scan the corresponding barcode below to enable or disable Interleaved 2 of 5.

* Enable Interleaved 2 of 5

Disable Interleaved 2 of 5

Interleaved 2 of 5 Length Settings

Allows reading of Interleaved 2 of 5 codes of a specific length. After scanning the length setting barcode, scan the 4-digit setting barcode to set `L1` and `L2`; `L1` and `L2` each occupy 2 digits. If there are less than 2 digits, add `0` in front.

When scanning the "Interleaved 2 of 5 arbitrary length" setting barcode, any length can be read, and there is no need to scan the numeric setting barcode.

Default

`4-99`

Set range

`01-99`

condition	Description
`L1 < L2`	`L1` is the minimum length, `L2` is the maximum length
`L1 > L2`	`L1` is the maximum length, `L2` is the minimum length
`L1 = L2`	Only read fixed length

Example

Only `4-8` characters are allowed to be read: scan the numeric setting barcode `0`, `4`, `0`, `8`, or `0`, `8`, `0`, `4`.

Fixed reading of `12` characters: Scan the numeric setting barcodes `1`, `2`, `1`, `2`.

Interleaved 2 of 5 any length

Interleaved 2 of 5 specified length

I 2 of 5 check code verification

When enabled, this parameter checks the integrity of the I 2 of 5 symbology to ensure compliance with specified algorithms, including USS (Uniform Symbol Specification) or OPCC (Optical Product Code Council)

* Disable

Enable

Transmit I 2 of 5 check digits

Scanning this barcode transmits a checksum of the data.

Transmit I 2 of 5 check digits

* Do not transmit I 2 of 5 check digits

NEC-25 (COOP 25) length setting

Allows reading of NEC-25 codes of specific lengths. After scanning the length setting barcode, scan the 4-digit setting barcode to set `L1` and `L2`; `L1` and `L2` each occupy 2 digits. If there are less than 2 digits, add `0` in front.

When scanning the "NEC-25 Any Length" setting barcode, any length can be read, and there is no need to scan the numeric setting barcode.

Default

`4-99`

Set range

`01-99`

condition	Description
`L1 < L2`	`L1` is the minimum length, `L2` is the maximum length
`L1 > L2`	`L1` is the maximum length, `L2` is the minimum length
`L1 = L2`	Only read fixed length

Example

Only `4-8` characters are allowed to be read: scan the numeric setting barcode `0`, `4`, `0`, `8`, or `0`, `8`, `0`, `4`.

Fixed reading of `12` characters: Scan the numeric setting barcodes `1`, `2`, `1`, `2`.

NEC-25 any length

Cancel Barcode

To change a selection or cancel an incorrect entry, scan the barcode below.

Setup Code: Cancel

11.7 Engine Character Table

Character Reference Table

When appending prefixes and suffixes to decoded data, follow these steps to select character values:

1. Set Output Data Transmission Format (parameter `0xE2`) to the required option.
2. Query the ASCII code value to be set according to the table, and enter it into prefix (`0x69`), suffix 1 (`0x68`) or suffix 2 (`0x6A`) in hexadecimal form.
